

Product Manager - Geroscience

Cambrian Biopharma is working on two new exciting initiatives and we are looking for a Product Manager - Geroscience to help build out both product offerings.

About Cambrian Biopharma

Cambrian Biopharma, a multi-asset longevity biotech, is building the medicines that will redefine healthcare in the 21st century – therapeutics to lengthen health span, the period of life spent in good health.

By partnering with leading academic institutions and biotech entrepreneurs worldwide, we are advancing a diversified pipeline of novel therapeutics, each targeting a biological driver of aging. Our approach is to develop interventions that treat specific diseases first, then deploy them as preventative medicines to improve the overall quality of life as we age.

Cambrian is a Distributed Development Company (or DisCo) that combines the advantages of a venture capital firm and a big pharmaceutical company with the nimbleness of a biotech startup.

Cambrian's sourcing and development engine allow us to identify promising science, deploy capital and teams of drug development experts, and provide stewardship to advance new medicines. By leveraging established expertise and repeatable functional models, we achieve vast efficiencies in execution speed and resource utilization.

To date, we have 14 novel therapeutics in development and have closed a Series C financing round in October 2021, which raised \$100 million. We plan to expand the number of programs. Further, we expect to initiate clinical trials for some of our three programs in the upcoming months.

Projects

Project Devonian

Devonian is a membership club that's in the business of longevity. We succeed as a business if our members live long, healthy and vibrant lives, fulfilling their goals and aspirations in the best of health. As part of this offering, we will offer comprehensive biomarker testing (including multi-omics) as well an evidence based review of longevity interventions.

Project Ordo

Ordo is the Cambrian longevity biomarker program. The key aim of Ordo is to establish and implement a strategy for biomarker data collection and longevity biomarker discovery to facilitate the clinical development of Cambrian and Industry-wide longevity drug assets. This project spans establishing and implementing protocols for sample collection, building a network of vendors on the cutting edge of omics approaches for big data generation and contributing to research and development to discover and validate the best biomarkers of aging. Developing biomarkers of aging is a critical step towards bringing longevity therapeutics to market, so this initiative is of key importance to Cambrian and to the entire longevity ecosystem.

Need

The current team is comprised of individuals of diverse backgrounds, from technical product management to data science and marketing. We are looking for an individual with a strong scientific background to complement our teams capabilities and act as the Internal Geroscience Expert / Scientific Product Manager on these projects. This individual should have enthusiasm for, and knowledge (academic and tribal) of, all things geroscience and can distill the knowledge and science out there to help drive, shape and fine-tune our offerings.

Requirements

- Required
 - Undergraduate/Masters degree from a top tier university in the life sciences
- Strong passion for geroscience and all things longevity; demonstrated interest in the field is preferred

- Highly familiar with the various research going on in the geroscience space, and keeps track of key players, technologies, developments, interventions, conferences, community, etc.
- Proficient in reading and reviewing peer reviewed scientific literature and drawing out key insights and implications for the field
- Experience thinking through broad strategic questions and distilling this information into actionable insights
- Tech-savvy, with a decent understanding of how technology based product are built
- Preferred
 - PhD from a top tier university in the life sciences space - focus on geroscience and related subjects
 - experience working in industry or at a top tier management consulting firm
 - Strong proficiency in Excel and Powerpoint

Role

In this role, the ideal candidate will guide product, marketing and business teams on all things longevity, including

- Being the scientific leader and point person for geroscience questions for a portfolio of initiatives
- Keeping up to date on researching and rating the science and evidence base behind different longevity interventions and understanding the nuances of how different interventions may be applied to different individuals based on alternative biomarker profiles
- Being responsible for the scientific accuracy and integrity of customer facing materials
- Shaping how we build our biomarker discovery research platform using a multi-omics approach
- Finding and overseeing vendors / collaborators / partners as needed for biomarker testing, data storage, data acquisition, data analysis, computational biology /

bioinformatics

- Becoming a thought leader in the geroscience space and building a strong network of other geroscience leaders

This can be a project-based, part-time or full-time engagement
